In Alicorp we work in a responsible manner, in strict compliance with the law and respecting our environment. We reject any practice that attempts against the environment and human rights.

In that sense, we have been taking actions to avoid the possible infiltration of supplies of non-sustainable origin, through the suppliers of our suppliers:

- In 2017, we joined the Roundtable on Sustainable Palm Oil (RSPO), one of the main international organizations that promotes the implementation and certification of sustainable practices in the palm oil supply chain.

- Likewise, in line with our sustainability commitments, we have carried out the following actions:
  - We certified our refinery in RSPO SCC, (CRSPO13366).
  - We approved our policy for responsible sourcing.
  - We ask our suppliers to ensure that we are supplied exclusively with non-questioned FFB. To date, all of our suppliers have manifested that the crude oil that is sold to us comes from non-deforested areas.

We are working with the mills that provide us with palm oil and different allies in their supply chain, so that they can adopt sustainable practices with the farmers that are part of its supply chain. We reiterate our firm commitment to develop, hand in hand with our suppliers, a local sustainable palm oil supply chain.
